DTDC Shipping Label API WS. (for E-commerce, GS, LTL & Express based Customer) Ver. 2.0

Introduction:

This API allows you to generate shipping labels for your packages. You can choose to receive the label in PDF format or as a Base64 encoded string.

Base URL: Replace **<API_BASE_URL>** with the actual base URL provided below.

 Live environment : https://dtdcapi.shipsy.io

 Staging environment : https://alphademodashboardapi.shipsy.io

Endpoint : <base_url>/api/customer/integration/consignment/shippinglabel/stream

Method: GET

Authentication: Authentication is done using an API key. Include the API key in the request headers as follows:

```
--header 'api-key: YOUR_API_KEY'
```

Request Parameters:

- **reference_number** (Required): The unique reference number assigned to the shipment within Shipsy.
- **label_code** (Required): The specific code for the type of shipping label you want to generate.
- **label_format** (Optional, defaults to pdf): The format of the downloadable label.

Supported Label Codes: The following are the supported label codes along with their descriptions:

Label Description	label_code
Shipping Label A4	SHIP_LABEL_A4
Shipping Label A6	SHIP_LABEL_A6
Shipping Label POD	SHIP_LABEL_POD
Shipping Label 4x6	SHIP_LABEL_4X6
Routing Label A4	ROUTE_LABEL_A4
Routing Label 4x4	ROUTE_LABEL_4X4

Invoice Print (for International orders only)	INVOICE
Address Label A4 (for Document)	ADDR_LABEL_A4
Address Label 4x2 (for Document)	ADDR_LABEL_4X2

Supported Label Formats:

- **pdf**: Generates a downloadable PDF file containing the shipping label.
- **base64**: Returns the label data as a Base64 encoded string, which can be decoded and used within your application.

Curl Examples:-

Generate PDF Label:

```
curl --location
'https://dtdcapi.shipsy.io/api/customer/integration/consignment/shippinglabel/stream?reference_number=<awb_no>&label_code=SHIP_LABEL_4X6&label_format=pdf' \
--header 'api-key: <api-key>
```

Generate Base64 Encoded Label:

```
curl --location
'https://dtdcapi.shipsy.io/api/customer/integration/consignment/shippinglabel/stream?reference_number=<awb_no>&label_code=SHIP_LABEL_4X6&label_format=base64' \
--header 'api-key: <api-key>'
```

Curl Explanation:

- **reference_number=<awb_no>**: This parameter specifies the reference number of the shipment for which you want to generate a label. Replace **<awb_no>** with your actual AWB/shipping/reference number.
- **label_code=SHIP_LABEL_4X6**: This parameter specifies the code for the desired shipping label format. In this example **SHIP_LABEL_4X6** is used, indicating a **4" x 6"** label. Refer to above documentation for available **label_code** options.
- **label_format=pdf** or **label_format=base64**: This parameter specifies the format of the downloadable label.

Response:

- **PDF Format:** The response will be the raw PDF data of the generated shipping label. You will need to save this data to a `pdf` file using an appropriate method depending on your programming language or environment.

Sample_labels:-

1. **SHIP_LABEL_4X6**

2. SHIP_LABEL_A4 / SHIP_LABEL_A6 / SHIP_LABEL_POD

Response	Code Remarks
200	Each consignment will be processed independently. For each consignment, "success"key will be either true or false. If success is true for a consignment, then the consignment is successfully entered into the DTDC system. If success is false, the consignment is not entered (in case of false, the response contains an error message reason)
400	There is some validation error in the overall request format. In this case, completerequest is rejected.
401	There is an authentication error.
